

ZENITH · IMAGE BRIEF · V1

Fourteen pictures the page is waiting for.

Every empty media slot on the one-pager: what it has to say, the exact box it drops into, and a prompt written so all fourteen come back looking like one photographer shot them in one evening.

The consistency comes from the preamble, not from the subjects.

Fourteen images generated one at a time will not match — different light, different grade, different lens. So every prompt in this document is built the same way: **one fixed style preamble**, then the subject, then the frame. Paste the preamble every single time, unchanged. It is the only thing holding the set together.

```
THE PREAMBLE — PASTE BEFORE EVERY SUBJECT

Editorial photograph, cinematic but unstyled. Late evening interior,
one dominant light source, everything else falling into shadow.
Muted near-neutral grade: warm off-white highlights (#FBFAF7),
deep near-black shadows (#14121C), low saturation overall.
Exactly one accent colour in frame — a violet screen glow (#5B3DF5)
used as a light source or a reflected edge on skin and surfaces,
never as a colour wash over the whole image.
35mm lens, shallow depth of field, fine 35mm film grain, gentle
halation on the brightest highlights. Natural skin tones.
No text, no logos, no watermark, no readable interface, no captions.
Not teal-and-orange graded. Not glossy stock photography.
```

THEN THE THREE LINES THAT CHANGE PER IMAGE

SUBJECT	Who or what is in frame, and the one feeling it has to carry.
FRAME	Aspect ratio, crop, and where the empty space has to be.
AVOID	The specific wrong reading — usually "sad", "menacing", or "gamer stereotype".

WORKING METHOD

- 01 **Generate tox-ghosting first.** It is the easiest one to get right — no people in it — and once you like it, feed it back in as a **reference image** for every other prompt. Nano Banana Pro takes up to 14 references; one good frame as a style anchor beats any amount of prompt wording.
- 02 **Say "match the lighting and grade of the reference"** on each subsequent prompt, after the preamble.
- 03 **Render at 2K or 4K**, then downscale to the export width in the table. Generating small and upscaling loses the grain.
- 04 **Export WebP at quality 82.** Name the file exactly the slot id. Drop it in **public/media/**.

On aspect ratios. Nano Banana Pro offers 1:1, 3:4, 4:3, 4:5, 5:4, 2:3, 3:2, 9:16, 16:9 and 21:9. Two slots on this page want **16:10**, which is not on that list — generate those at **3:2** and crop the long edge. Every other slot maps to a native ratio exactly.

Six values. The violet is a light source, never a filter.

These are the live tokens from `src/cleo/tokens.css`, not a moodboard. Quote the hex codes in the prompt — the model responds to them — but read the note under each one, because *where* a colour is allowed to appear is what actually keeps the set consistent.

Ink
#14121C
Shadow. The deepest value in every frame. Not pure black.

Void
#FBFAF7
Highlight, and the page these sit on. Warm off-white.

Violet
#5B3DF5
The one accent. Screen glow, LED, reflected rim light.

Violet deep
#2F1A8F
Where the glow falls off into shadow.

Violet tint
#EEEEAF
The palest bloom on a lit surface. Use sparingly.

Gold
#8F6410
Rationed to the coin and collectible imagery only.

Raised
#F1EEE8
Panel ground behind the image. Its edge tone.

Ink dim
#666277
Mid-tone. Where most of the frame should live.

THE FOUR RULES THAT DO THE WORK

One light source	A monitor, a phone, a window, a ring light. Never two competing.
One accent	Violet, and it must be emitted by something in frame.
Low saturation	Everything that is not the accent sits near neutral.
Grain, always	The site runs a film-grain layer. Clean digital images fight it.

Do not use gold as a general warm tone. On this page gold is reserved for the Zenith Coin and the collectible layer. A gold-lit room reads as a different brand.

The problem panels

These two live inside full-bleed panels, which means **type sits on top of them** — an eyebrow and headline at the top-left, a caption at the bottom-left — over a light scrim. The image is cropped to fill the panel, so the subject must survive losing its edges.

problem-retention

P1

1 : 1
RATIO

1600²
EXPORT

1:1
GENERATE

SECTION 01 — THE PROBLEM · LEFT PANEL · TYPE OVERLAYS

The feeling: the session is going fine and nobody is talking. Unaccompanied, not miserable.

PROMPT — AFTER THE PREAMBLE

SUBJECT: One person alone at a desk in a dark room, mid-gaming session, seen from behind and slightly to the side. The monitor is the only light and it throws a violet-white glow across their shoulders and the wall behind. Headset on. Hands on the keyboard. The room around them is unremarkable and lived-in. Nobody else is present and no second chair.
FRAME: 1:1 square. Subject sits right of centre and high; the bottom-left quadrant is empty wall or desk in shadow — text will be placed there. Loose crop, room visible around them.
AVOID: no sad expression, no slumped posture, no dramatic loneliness, no clutter of energy drinks or RGB keyboards.

Keep the bottom-left third quiet. A caption block sits there at 340px wide. Anything detailed under it is lost.

problem-figures

P1

1 : 1
RATIO

1600²
EXPORT

1:1
GENERATE

SECTION 01 — THE PROBLEM · RIGHT PANEL · 22% / 65% FIGURES OVERLAY

The feeling: nothing. This one is a ground, not a picture — two large retention figures are printed over it and they have to stay readable. Almost abstract.

PROMPT — AFTER THE PREAMBLE

SUBJECT: An almost abstract texture, no people, no objects that read as anything specific. A dark wall in a dim room with a single violet light falling across it from the left, going soft and empty toward the right. Faint dust in the air catching the light. Think of a wall, not a scene.
FRAME: 1:1 square. The right two-thirds is near-empty gradient from mid grey into shadow — large numbers will be set over it. Detail only in the far left edge.
AVOID: no recognisable objects, no strong pattern, no bright spots anywhere right of centre, no symmetry.

Low contrast is correct here. If you can read a subject in it, it is too busy — the figures lose.

What goes wrong · three panels, one row

A tight three-up. These read as a set more than any other slots on the page, so generate them together in one session and keep the same room if you can. Type overlays all three.

tox-abuse

P1

3 : 4
RATIO

1200×1600
EXPORT

3:4
GENERATE

WHAT GOES WRONG · PANEL 1 OF 3 · "ABUSE."

The feeling: tension in the shoulders, not in the face.

PROMPT — AFTER THE PREAMBLE

SUBJECT: Close portrait of a young adult wearing a gaming headset, pulling back and away from the microphone, head turned so the face is partly outside the frame. Violet monitor light from the front left, deep shadow on the right. The tension is in the neck and shoulders. Eyes not visible.

FRAME: 3:4 portrait. Subject fills the upper two-thirds, cropped tight. Bottom third falls into shadow for text.

AVOID: no shouting, no crying, no hands over ears, no visible anger, no face fully in frame.

tox-ghosting

P1

DO THIS ONE FIRST

3 : 4
RATIO

1200×1600
EXPORT

3:4
GENERATE

WHAT GOES WRONG · PANEL 2 OF 3 · "GHOSTING."

The feeling: the session ended and the person is gone. This is the one that must have no person in it at all.

PROMPT — AFTER THE PREAMBLE

SUBJECT: An empty desk chair, still lit by a monitor that is on. A headset lying on the desk where it was put down. The violet screen glow falls across the empty seat and the floor. The room is dark and completely still. Absolutely no person, no hands, no silhouette, no reflection of anyone.

FRAME: 3:4 portrait. Chair slightly off-centre, empty floor in the lower third. Monitor at the edge of frame, mostly out of shot.

AVOID: no person anywhere, no readable screen content, no horror-film staging, no overturned furniture.

Use this as the style reference for the other thirteen. It has no face to get wrong, so it is the cheapest frame to iterate on until the grade is right.

tox-catfishing

P1

3 : 4
RATIO1200×1600
EXPORT3:4
GENERATE

WHAT GOES WRONG · PANEL 3 OF 3 · "CATFISHING."

The feeling: unverified. The subject is ambiguity, not threat.

PROMPT — AFTER THE PREAMBLE

SUBJECT: A face lit hard from one side only, so that half of it is completely unreadable in shadow. Young adult, neutral expression, looking slightly off-camera. The lit half is clean and ordinary; the dark half gives nothing away. Violet light source.

FRAME: 3:4 portrait, tight on the head and shoulders. The shadow side occupies the left of frame.

AVOID: nothing menacing, no hood, no mask, no smirk, no crime-documentary lighting. This person is not a villain — they are simply unconfirmed.

The failure mode here is melodrama. If the frame implies danger, the section stops being about identity and starts being about crime. Regenerate rather than settle.

The two personas

These sit in a white card next to a named quote and an age, city and job. That is what makes them different from every other slot in this document, and it changes the recommendation — see the note below.

Do not generate photoreal faces for these two. A generated face presented as a named user on a pre-launch investor page is the kind of thing that gets noticed once and then recolours everything else on the page. Generate them as **illustration or a heavily abstracted treatment** instead — the prompts overleaf are written that way on purpose. Halftone, dot-matrix or a flat two-colour reduction all read as deliberate design rather than as a claim about a real person.

Illustrated, not photographed

persona-soojin

P1

1 : 1
RATIO1200²
EXPORT1:1
GENERATE

SECTION 04 — WHO WE BUILD FOR · 28 · MARKETER · SEOUL

Who she is: two free evenings a week, has never kept a single person from a match. She should look like someone with spare evenings — not like a gamer archetype.

PROMPT — AFTER THE PREAMBLE

SUBJECT: Stylised editorial portrait of a woman in her late twenties, at home on a sofa in soft evening light, phone in hand but not being looked at. Calm, unposed, slightly distracted. Rendered as a coarse halftone dot-matrix illustration in two tones only — near-black #14121C dots on warm off-white #FBFAF7 — with a single violet #5B3DF5 highlight on the phone's glow. Clearly an illustration, not a photograph.

FRAME: 1:1 square, head and shoulders, centred, generous space above the head.

AVOID: no photorealism, no gaming setup, no headset, no desk, no smiling-at-camera stock pose, no text.

persona-ren

P1

1 : 1
RATIO1200²
EXPORT1:1
GENERATE

SECTION 04 — WHO WE BUILD FOR · 24 · STUDENT · OSAKA

Who they are: stopped using voice entirely after being abused in a lobby, now queues muted. The mic has to be visible and unused.

PROMPT — AFTER THE PREAMBLE

SUBJECT: Stylised editorial portrait of a person in their early twenties at a small desk in a student room, a microphone on a stand in the foreground clearly pushed aside and unused. They are looking at a screen out of frame, composed and quiet. Same coarse halftone dot-matrix illustration treatment as the other persona: two tones, near-black #14121C on warm off-white #FBFAF7, one violet #5B3DF5 accent from the screen.

FRAME: 1:1 square, head and shoulders, mic entering the lower third of the frame. Match the crop of the first persona exactly.

AVOID: no photorealism, no visible distress, no headset worn, no text, no gendered styling cues — the copy never states a gender.

Generate both in one turn, or pass the first as a reference for the second. Two illustrations in slightly different halftone densities look like a mistake, and they sit in the same carousel one click apart.

Market · two places that already pay

No type over these — they sit above their own caption, so the whole frame is yours. Both want **16:10**, which the model does not offer: generate **3:2** and crop the long edge.

market-us

16 : 10 1920×1200 3:2 → crop
RATIO EXPORT GENERATE

SECTION 05 — MARKET · "WHY THE UNITED STATES FIRST"

The argument: the spend is already there and already social. So: more than one person, one screen.

PROMPT — AFTER THE PREAMBLE

SUBJECT: Two or three friends in an American living room or dorm in the evening, gathered around one screen, mid-conversation rather than mid-game. Relaxed, ordinary furniture, takeaway on the table. The screen is the light source and throws violet across all of them.

FRAME: 3:2 landscape, to be cropped to 16:10 — keep the subjects clear of the top and bottom edges. Wide enough to show the room. AVOID: no esports arena, no team jerseys, no RGB gaming cave, no one playing alone, no faces to camera.

market-japan

16 : 10 1920×1200 3:2 → crop
RATIO EXPORT GENERATE

SECTION 05 — MARKET · "WHY JAPAN NEXT"

The argument: collectible and gacha mechanics are native there. That texture *is* the section — get it in frame.

PROMPT — AFTER THE PREAMBLE

SUBJECT: A Japanese game centre or arcade street at night, seen at human eye level. Rows of capsule-toy machines and blind-box product filling the frame, their own lighting doing the work. One or two people browsing, seen from behind. The palette stays muted and near-neutral apart from the machine glow — let the violet sit in the signage and the screens. A restrained amount of warm gold is permitted here, and only here, because the collectible layer is the point.

FRAME: 3:2 landscape, to be cropped to 16:10. Depth down the aisle or street rather than a flat wall. AVOID: no anime characters, no readable Japanese text, no neon-cyberpunk saturation, no tourist-postcard Shibuya crossing.

Three phases, three places

A three-up grid, so these read as a set. Same treatment, same distance from the subject, three different rooms.

road-korea

4 : 3 1600×1200 4:3
RATIO EXPORT GENERATE

SECTION 06 — PHASE 1 · TESTBED · KOREA

What it is: a Korean PC café. Rows of machines.

PROMPT — AFTER THE PREAMBLE

SUBJECT: The interior of a Korean PC café at night, shot down a long row of identical machines in perspective. Monitors on, mostly empty seats, a few people far down the row seen from behind. The screens are the only light and they line the ceiling in violet. Ordinary, slightly worn, not new.
FRAME: 4:3. Strong one-point perspective down the aisle.
AVOID: no branding, no readable screens, no crowd, no tournament staging.

A real photograph beats a generated one here. PC cafés are specific enough that a generated interior tends to read as almost-right, which is worse than plain. Licence a stock frame if one matches the grade.

road-us

4 : 3 1600×1200 4:3
RATIO EXPORT GENERATE

SECTION 06 — PHASE 2 · SCALE · UNITED STATES

What it is: creator-facing. A small setup, mid-stream.

PROMPT — AFTER THE PREAMBLE

SUBJECT: A modest home streaming setup, one ring light on, a person mid-broadcast seen from the side or three-quarters behind, talking to the camera. Small room, real apartment, not a studio. Ring light plus violet screen glow.
FRAME: 4:3. The setup and the room both visible; subject off to one side.
AVOID: no professional studio, no sponsor wall, no huge follower counts on screen, no face to camera.

road-japan

4 : 3
RATIO1600×1200
EXPORT4:3
GENERATE

SECTION 06 — PHASE 3 · MONETISE · JAPAN

What it is: retail. A shelf of blind-box or gacha product.

PROMPT — AFTER THE PREAMBLE

SUBJECT: A retail shelf of blind-box and capsule-toy product, shot straight on and close. Repeating rows of identical boxes, their packaging abstract and unreadable. Shop lighting from above, violet reflection on the plastic. Warm gold permitted in the packaging, restrained.

FRAME: 4:3. Fill the frame with the shelf — no floor, no ceiling, no people.

AVOID: no recognisable franchises, no readable text or logos, no anime faces on the boxes, no price tags.

Team · the two honest options

Two 4:5 slots sit in section 07, under the line “Two people, both building the thing they wanted to exist.”

Do not generate these. `team-sagar` and `team-two` are the founding team on an investor-facing page. There are exactly two acceptable answers: **real photographs of the two of you**, or **no photographs at all** — the slots come out and the cards run on name and title alone. A generated founder is the one error on this page that cannot be walked back.

team-sagar / team-two

4 : 5

INSTALLING ONE

- 01 Save it as `public/media/<id>.webp`, named exactly the slot id.
- 02 In that section's `.jsx`, add `src` and a real `alt`:

```
<Slot id="tox-ghosting" ratio="3 / 4" src="/media/tox-ghosting.webp" alt="An empty chair still lit by a screen" />
```
- 03 That is the whole change. The box is already reserved, so nothing else on the page moves.

Any Priority-1 still can be a 3–6 second silent loop instead. Same framing, no cuts, almost no motion — a screen flickering, someone breathing. 1080p H.264 under 2 MB; the slot detects `.mp4` and renders a muted autoplay video. Export frame one as the poster. `tox-ghosting` is the strongest candidate: an empty lit chair with a flickering screen does more in four seconds than any still can.
